Project Description:

MEI is assigned to identify global successful green finance products, services and programs for rural and lower income population especially small business owners in the rural areas, which are suitable for implementation in Mexico. The findings of this study will allow Sparkassenstiftung to design and propose initiatives to support the Mexican rural sector at a later stage.

Services Provided:

- Creation of assessment methodology to select successful green products, services and programs specific for rural sector in Mexico.
- Identification of global green finance programs in countries that have similar characteristics and conditions with Mexico.
- Creation of comprehensive format to document findings of worldwide green finance products, finance and programs.
- Evaluation of identified products, services and programs.
- Selection of ten (10) most successful programs that have the highest success potential upon implementation in the rural regions of Mexico.
